Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

- Material of gloves
  - Butyl rubber, BR
  - The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.
- Penetration time of glove material
  - Thickness of the gloves  $\geq 0,3$  mm (n-butylacetate)
  - Value for the permeation: Level  $\geq 60$  min (n-butylacetate)
  - The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
